# Ayush Pandey

## Systems Engineer

75013 Paris

07 81 49 75 76

ayushpandey8439@gmail.com

in www.linkedin.com/in/ayushpandey8439/

#### Skills

General Skills

Graph databases
Non-relational data models
Distributed systems
Concurrent programming
Consistency protocols
Storage systems

Formal methods

**CRDTs** 

Database design and architecture System Design

Tools

Neo4j Gremlin NoSQL PostgreSQL Redis Docker

UNIX environnement

Languages

Java C++

**Erlang, Elixir**Python

C Bash

Speaking

Hindi -Native English - Fluent

French - Conversational

### Experience

2022-2025 PhD Researcher, LIP6, Sorbonne Université (UPMC), Paris

Git

- O Thesis: CALock: topological multi-granularity locking in hierarchies
- O Designed, implemented and verified a new locking protocol for parallel threads over hierarchical data. CAlock identifies an optimal grain size for locking in a hierarchy of data structures.
- Implemented and verified several thread synchronization protocols in java and c++ as well as database implementations in TinkerPop as PoC. Performed benchmarks for performance evaluation.
- Collaboration in projects involving industry partners and research labs. Ongoing collaboration with Telecom sudParis under the project VERDI to design, implement and formally verify a distributed graph database. Second ongoing work within LIP6 on the specification and verification of a distributed key value store.

2021-2022 Research Intern, LIP6, Sorbonne Université (UPMC), Paris

- o **Implementation of a cache for a CRDT datastore**. Worked on designing and implementing an in memory cache and checkpoint store for AntidoteDB.
- O Undertook performance benchmarking in a distributed environment with Riak Bench.
- Fixed several bugs in the general implementation of AntidoteDB and achieved a 40% performance improvement in the read path.
- Tech Report: Persisting the AntidoteDB Cache

2020-2021 Full stack Web Engineer, LernFair e.v., Remote, Germany

- Worked on the development of an online learning platform for school students to facilitate remote learning during Covid-19 lockdowns.
- Implemented the frontend in ReactJS and the backend in NodeJS and GraphQL along with alpha and beta testing of features.
- o Implemented the service layer in a microservice architecture with content delivery through REST APIs.

2020-2021 Research Assistant, German Center for AI (DFKI), Kaiserslautern, Germany

- O Developed a custom tool for visual graph editing tool with automated graph structuring and enforcing P&ID constraints on nodes and edges of the graph in AngularJS and D3.js.
- O Writing test suites for performance. testing on peak loads and high data volumes with python.

2017-2019 Software Engineer, Newgen Software Technologies, India

- Development of custom workflow, content management and business process automation solutions for major Banks, Health care providers and insurance companies.
- O Developed custom dashboards and reports for telemetry and report generation.
- O Delivered technical training and support to business clients in the asia pacific region.

#### Education

- 2025 **PhD in Distributed systems**, LIP6, Sorbonne Université (UPMC)
- 2022 Master in CS, Software Engineering, TU Kaiserslautern, Kaiserslautern, Germany
- 2017 Bachelor of Technology, APJ Abdul kalam technical university, India
